

What is claimed is:

- 1 1. A container for a soap dispenser, the dispenser having a structure that
2 defines a recess, the container comprising:
 - 3 a) a hollow body adapted to fit within the recess;
 - 4 b) a projection for limiting movement of the body within the dispenser,
5 said projection extending outwardly from said body toward the
6 structure of the dispenser for selective engagement therewith.
- 1 2. The container of Claim 1, wherein said projection extends laterally outward
2 from said body.
- 1 3. The container of Claim 1, wherein said projection extends longitudinally
2 outward from said body.
- 1 4. The container of Claim 1, wherein said body includes a pair of projections
2 extending outward from said body in opposite directions relative to each
3 other.
- 1 5. The container of Claim 1, wherein said body has a longitudinal axis and a
2 second projection, wherein said projections are symmetrically located on
3 said body relative to the longitudinal axis.
- 1 6. The container of Claim 5, wherein said projections extend an equal distance
2 from said body.
- 1 7. The container of claim 1, wherein said projection has a laterally extending
2 surface oriented perpendicular to a longitudinal axis of said body.

1 8. The container of claim 1, wherein said projection has a surface extending
2 perpendicular to a lateral axis of said body.

1 9. The container of claim 1, wherein said projection has a surface extending
2 parallel to a longitudinal axis of said body and a surface extending
3 perpendicular to the longitudinal axis of said body, wherein said surfaces are
4 adapted to engage the dispenser.

1 10. A container for soap comprising:
2 a) a body having a top, a bottom, a front, a rear, and opposing sides
3 connecting said top to said bottom and said front to said rear, said body
4 having a longitudinal axis and a depth, wherein said body is made
5 hollow to receive the soap;
6 b) a pair of longitudinal projections extending outward from said body in
7 a direction parallel to the longitudinal axis of said body;
8 c) a pair of lateral projections extending laterally outward from said
9 body;
10 d) a pump attached to said body and in fluid communication therewith for
11 selectively discharging the soap from said body; and
12 e) wherein said pairs of projections are symmetrically arranged on said
13 body relative to the longitudinal axis.

1 11. The container of Claim 10, wherein said longitudinal projections extend
2 from a top surface of said body.

1 12. The container of Claim 10, wherein said lateral projections extend from
2 opposite sides of said body.

- 1 13. The container of Claim 10, wherein said projections are located between said
2 front and said rear of said body and have a depth of about one-half of a depth
3 of said body.
- 1 14. The container of Claim 10, wherein said projections extend across only a
2 portion of said depth defining a clearance.
- 1 15. The container of Claim 14, wherein said projections are centered in the
2 depthwise direction, whereby said clearance is defined on front and rear
3 sides of or said projection.
- 1 16. The container of claim 10, wherein said projections have a substantially
2 cubed shape.
- 1 17. A container for soap used in connection with a keyed dispenser, the
2 container comprising:
3 a hollow body for receiving the soap;
4 a projection extending laterally from said body and engageable with
5 the interior of the dispenser to laterally restrict movement of the container;
6 and
7 a projection extending longitudinally from said body and engageable
8 with the interior of the dispenser to longitudinally restrict movement of the
9 container without a key.
